

RoofLine

Solar Hot Water Systems

Improve the energy rating of your home and **SAVE!**

Use the Sun's unlimited **FREE** energy to provide up to **80%** of your hot water heating needs.

Chromagen's RoofLine solar hot water heaters are traditional close-coupled thermosiphon systems, combining roof mounted solar collectors and storage tanks, which are ideal for applications that are short of available ground space. RoofLine systems are highly efficient and use natural thermal convection to circulate hot water from the collectors to the tank without the need for electric pumps.

Harvest the sun's unlimited power

Chromagen's RoofLine systems may include either of two high quality flat plate collectors:

BlackMax solar collectors provide a system that perfectly combines performance and economy. These collectors have evolved over many years to become one of the most highly efficient and durable solar thermal collectors available today.

Chromagen's premium **EcoBlue** collectors consist of the latest "Blue Sputter" coating technology, developed in Europe to provide the ultimate thermal absorption properties whilst minimising heat losses, for ultimate efficiency. The advanced EcoBlue collectors allow Chromagen to offer single-panel system options for your convenience.

Reliable hot water on tap

Chromagen RoofLine systems are available with the choice of either gas or electric auxiliary boosting to provide reliable hot water in any weather, and to meet the power requirements of your specific location.

Gas boosted models feature Chromagen's brilliant Eternity continuous flow water heaters, featuring a high 6 Star energy rating to ensure perfect hot water whenever you need it, with low running costs. Electric-boostered models feature an in-tank heating element that activates only when the stored water temperature drops below a set point.

Eternity Gas Booster

Advanced water storage

RoofLine systems feature world class Chromagen water storage tanks in 200 and 300 litre capacities. Chromagen tanks have evolved from decades of design refinement and feature high quality construction, insulation and coating for a long service life in Australia's harsh conditions.

Chromagen's RoofLine range is available in open loop systems for regular applications, and closed loop configurations suitable for harsh conditions, such as frost prone or hard water areas.

Why choose Chromagen?

- An international leader in thermal solar energy solutions since 1962
- Collectors and storage tanks manufactured to ISO 9001 international quality standards
- Nation-wide sales and service networks
- In-house RECs department
- Committed to quality, innovation & energy efficient solutions
- A one-stop-shop for your green energy solutions
- Other quality Chromagen products include:
Split system solar hot water, Air source heat pumps, Continuous flow gas water heaters and Solar electricity systems

Your local Dealer / Distributor is:

BlackMax	CR110BP	1072	2187	90	37	40.6	2.14	

^ Width dimension excludes connecting sockets.

How Solar Hot Water Works

1. Cold water circulates through the roof panels, and is heated by the sun.
2. The heated water returns to the tank, and is stored for later use.
3. At night (or on especially cold days), the gas or electric booster activates to ensure the water is heated to a suitable temperature.

NOTE: An approved tempering valve must be fitted on the hot water outlet from the gas hot water system. WARNING: Do not use plastic pipe between the storage tank and solar collector panels. To do so will have catastrophic consequences. Insulation of copper flow and return lines must be in accordance with AS 3500.4 industry standard.
